DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I claims 1-19 in Paper No. 8 is acknowledged. Applicant's election of species of using no chromatography with traverse is noted. The traversal is on the ground(s) that the examiner did not list the specific species for the applicant. This is not found persuasive because as stated previously if the applicant looks at claims 4-9 he/they would see the species, i.e. the chromatography used. Claim 1 is a generic claim. Claims 4-9 are species of claim 1. Thus, applicant was required to pick a species from a generic claim. The election of species with regard to the type of enzyme and cell is withdrawn.

Thus, claims 3-9 and 19-26 are withdrawn from further consideration by the examiner as being drawn to non-elected subject matter.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 1654

Claims 1, 2, 10-18 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a DNA polymerase from *Pyrococcus furiosus*, does not reasonably provide enablement for a DNA polymerase from any and all "samples". The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims.

The specification as filed, is enabled for a DNA polymerase from *Pyrococcus furiosus*, but is not enabled for a DNA polymerase from any and all "samples".

The art of biotechnology is a highly unpredictable art and it would be an undue burden for one of ordinary skill in the art to test any and all sources to see if they contained the claimed enzyme.

Applicant has only shown in their examples one source of the claimed enzyme, namely, *Pyrococcus furiosus*. With only knowing this one source it is clear that such broad claims are not enabled by the instant specification when one of ordinary skill in the art is only given one particular source from which to isolate the claimed enzyme.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1654

Claims 1, 2, 10-12, 14, are rejected under 35 U.S.C. 102(b) as being anticipated by Bezuglyi et al., Bernard et al., or Grandogenett et al.

The references each teach a DNA polymerase being purified using Poly U Sepharose chromatography.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, 10-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Bezuglyi et al., Bernard et al., or Grandogenett et al.

The references each teach a DNA polymerase being purified using Poly U Sepharose chromatography.

It would have been obvious to use the specific types of polymerases and cells since such cells and enzymes are well known in the art. To use such enzymes and cells are simply the choice of the artisan in an effort to optimize the desired results.
